

Quicklooks of NRT merged LEO and GEO land surface temperature products now available

The ESA Due Globtemperature Project is pleased to announce that quicklook global maps of land surface temperature (LST) are available on the Data Portal, created from multiple satellite streams:

- Resolves diurnal cycle: merger of GEO+LEO satellite products of LST;
- Global maps of LST available 3-hourly within 48 hours of observation time;
- Archive of quicklooks for full, merged GEO+LEO dataset is available back to 2nd Sept 2017. Full dataset also available for download.
